

# Lock Forming Machine

## Description

OCT-LFM Pittsburgh lock machine is multi-function. This machine specializes in processing different kinds of square or quadrate ducting pipes. Models of Pittsburgh lock machines manufactured by our factory range with shaping steel thickness from 0.4mm to 2.0mm. All models differ from each other in shaping and processing steel thickness.

This machine is of small volume, light weight and it is convenient to move, simple to adjust, reliable to operate, so it is especially suitable for spot processing of ducting pipes in mining, corporations, hotels and supermarkets.
